## PROFESSIONAL SUMMARY

---

I am a current data science student who is drawn to work that bridges people, data, and systems to create real-world change. I am particularly interested in leveraging data analysis and machine learning to uncover meaningful patterns, translate complex findings into compelling narratives, and support informed, actionable decision-making. My goal is to use data-driven insights to highlight needs, evaluate impact, and guide strategies that create measurable improvements for organizations and communities.

## EDUCATION

---

**Masters of Science, Data Science**, Willamette University | *Portland, OR* **Aug 2026**

**Bachelor of Arts, Political Science**, Brigham Young University | *Provo, UT* **May 2022**

## SKILLS

---

- |                            |                    |                          |
|----------------------------|--------------------|--------------------------|
| • Microsoft Office         | • Machine Learning | • Conflict Management    |
| • SQL & Data Organization  | • R, Python        | • Humanitarian Aid       |
| • Tableau, Power BI, Shiny | • Project Tracking | • Mental Health Training |

## RELEVANT PROFESSIONAL EXPERIENCE

---

**Junior Analyst**, Acuity Professional Consulting | *Portland, OR* **Nov 2024 – Dec 2025**

- Supported 3 projects by creating timelines, managing tasks, and ensuring deliverables met deadlines
- Troubleshooted and measured chatbot performance and identified areas of improvement in edge cases
- Used PowerBI to display findings and statistics of projects to clients
- Supported financial data reconciliation and reporting processes, ensuring accounting data accuracy

**Families First Specialist**, Utah Youth Village | *Holladay, UT* **Oct 2022 – Nov 2024**

- Mediated conflicts between parents and children, facilitating positive communication
- Collaborated with judicial organizations to implement evidence-based intervention strategies
- Conducted risk assessments and created individualized treatment plans to improve family dynamics
- Provided 24/7 crisis support to families in need

**LDS Family Services Intern**, Europe Area Welfare Dept. | *Frankfurt, Germany* **May 2022 – Aug 2022**

- Designed and managed SQL-based datasets to track program participation and outcomes across five countries, improving reporting consistency and insight accessibility for leadership teams
- Conducted training to provide access to mental health assistance for refugees across 27 countries
- Managed a multilingual social media campaign to promote mental health awareness
- Assembled a European-wide therapist network for crisis support to aid recent immigrants

**Humanitarian Analyst Intern**, Europe Area Welfare Dept. | *Frankfurt, Germany* **Oct 2021 – Aug 2022**

- Analyzed and reported multi-country humanitarian data to determine the best ways to target assistance to refugees from varying backgrounds
- Provided assistance to Ukrainian refugees as they entered Poland during wartime conflict
- Standardized tracking for 20 service projects, tracking metrics and efficiency via Excel and reporting findings to leadership via PowerPoint

## CURRENT/RECENT PROJECTS

---

**Medical Spending Predictive Model**, Data Science with Python Class **Aug 2025 – Dec 2025**

- Used Python to extract pertinent information, merge, and clean datasets. Conducted basic EDA to decide what model best fit the data.
- Developed a machine learning pipeline using Random Forest regression to forecast state-level personal healthcare spending by category, enabling forward projections for policy and budget planning scenarios.
- Generated interpretable forecasts for specific state and service categories (e.g., Oregon hospital care spending), providing actionable estimates that can support resource allocation and trend analysis.

**Portland Streetlight and Crime Reports, Data Visualization Class**

**Jan 2026 – Present**

- Used R to wrangle and combine 3 datasets: districts of Portland, Portland Crime Reports for 2025, and City Streetlight locations. Conducted basic EDA, and statistical tests graphics to figure out the best way to visualize the correlation between Portland's nighttime crime and the presence of streetlights.
- Created a map within R that overlays all of the locations of the reported crimes with the locations of city streetlights, accounting for only crimes committed after dusk and filtered to show crimes most likely to be affected by the presence of light.
- Built a Shiny Application that allows the user to select a specific district in Portland and shows the amount and type of crime, as well as what time of day the crimes were committed.
